

## Constituent Management for Corrections

State departments of correction and county jails must deploy a system for notifying victims, constituents, law enforcement officials and other stakeholders when an offender's custody status changes. Timely and accurate notifications are important not only to victims of violent crime but to those involved in parole or probation monitoring.

Corrections and law enforcement agencies need a flexible, easy-to-use solution that integrates with existing systems to provide critical updates in a timely manner.

**SAVIN360** is built on the proven Microsoft Dynamics CRM and SharePoint platforms which provide flexibility, scalability, integration capabilities and powerful workflow features.

In addition to providing case management, performance monitoring and decision support tools, **SAVIN360** provides a repository for storing documents and photos ensuring quick access to critical documentation.

### Serve More, Spend Less

- More options for notification, including notification by event type
- Coordinated case management tools
- Low implementation, support and maintenance costs reducing dependency on federal funding

Offender Details

### Improve Information Flow

- Victim/Constituent Notification
- Integrated Alert System
- Law Enforcement Notification
- Sex and Violent Offender Registry Feeds
- Parole Board Hearing Input
- Per-diem Tracking for Jails
- Pre and Post-Release Information
- Appellate and Trial Court System Input

Notification Options

### Personalize Notification

- 24/7 Notification and Access
- User-Friendly website with photos, user defined options and update capability
- Constituent feedback mechanism
- Proactively prompts users for information updates

### Flexible Reporting through Microsoft Office Integration

While **SAVIN360** provides a number of standard reports, users can build custom queries and easily export results to Microsoft Excel or Word for powerful ad-hoc reporting capability. Users can also leverage the Microsoft SQL Server Reporting Services wizard to build more complex reports.

### Mailing Lists

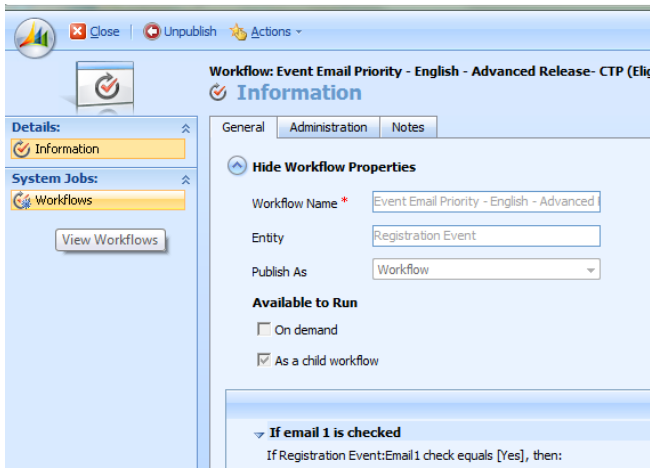

**SAVIN360** provides the ability to create user-defined and system-wide custom mailing lists for email or regular mail and Microsoft Word mail merge for correspondence generation and management that can significantly improve communication with constituents and other stakeholders.

### External Interfaces

**SAVIN360** can be integrated with other systems for data import, export, website publishing or through web services.

# Constituent Management for Corrections

Microsoft Workflow Function

## Workflow Automation

SAVIN360 leverages Microsoft’s powerful workflow engine Windows Workflow Foundation (WF) to power the notification and case management process. Users can add to workflows through an intuitive, easy-to-use interface that facilitates automation of even highly complex processes. Workflows automatically generate notification activities and provide alert and escalation capabilities when tasks are not completed in a timely manner. Additionally, research tasks and follow-up activities are created when contact information is outdated or incomplete.

## SAVIN360 Benefits

**Comprehensive end-to-end data tracking solution.** Provides single source of up-to-date information for users that facilitates timely and accurate notification and alerts.

**Familiar User Interface leads to Easy Adoption:** Because the solution utilizes the Microsoft “look and feel” users can become proficient in a matter of hours. To many users, the solution feels like an extension of Microsoft Office functionality that is tailored for Corrections case management.

**Extensible platform using well known development tools:** The solution may be customized and configured to meet the specific requirements which vary by state or local government. The proven Microsoft development platform is in use across the country with over one million users worldwide.

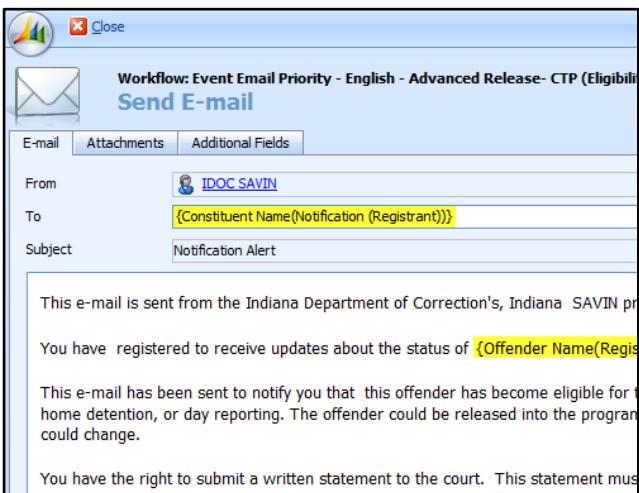

**Role-Based Security Model:** The solution provides a robust, role-based security model that preserves data integrity while respecting privacy concerns.

**Improved Transparency and Accountability:** Activities and events are automatically captured and related to appropriate records so that users can view historical data as well as uncompleted tasks.
